

Guide for Group Project Prep, Rehearsal, and Reporting + Q&A

Starting week 9, the weekly assignments are group reports. 1-2 groups may be selected to present the weekly group project.

- Each group has a **5 min oral report**, followed by **3 min Q&A**.
 - a. For oral report: Only one member is required to come up to the podium to give the oral report. The speaker's role should be rotated from week to week so everyone gets a chance to present.
 - b. For Q&A: Any group member may answer, depending on the questions asked.

Because any group could be selected to present next Monday, prepare as if you will.

For this week, use the given dataset to perform association rule mining with Apriori-based approaches using *mlxtend* and *apyori* libraries.

What to Prepare Before Class

- A clean notebook that runs from top to bottom
- A deck of slides (pptx or equivalent) that illustrates the notebook story
- Work closely with your team members to practice/rehearsal for the presentation.

What to Cover in the Presentation

- A job-breakdown table describing each member's contribution
- How the data was cleaned or transformed (if applicable)
- Which libraries were loaded and why
- Which algorithm was used and why it fits this task
- Which hyperparameters were chosen and how they affect the results
- What visualizations were made, if any
- How to interpret the rules and metrics
- What the practical meaning of the results is

5-Minute Presentation Structure (Recommended)

1. Problem and data (30 sec)
2. Method, libraries, and parameters (1 min 30 sec)
3. Key results and visualization (1 min)
4. Interpretation and practical implications (2 min)

3-Minute Q&A Strategy (Assuming you have 3 members)

- 1 member handles metric interpretation (support/confidence/lift)
- 1 member handles parameter choices and sensitivity
- 1 member handles practical implications and limitations
